ONE LESS FOOTPRINT

FTA COFFEE
PROVIDES CLIMATE
ACTIVE CERTIFIED
CARBON-NEUTRAL
GREEN COFFEE SINCE
2022.

Our coffee has a zero carbon footprint.

Up to 3kg of CO₂-e emissions are created for each kilo of roasted coffee produced in Australia. We can change this outcome together.

Where our emissions come from:

Our mission:

WHAT

What is Carbon Neutrality? Carbon neutrality is achieved when greenhouse gas emissions from a particular activity, process, or an entire organisation has been reduced to zero. This means reducing emissions where possible and compensating for the remainder by investing in offset units to achieve zero overall carbon emissions.

HOW

How have we achieved being Carbon Neutral? We have reduced our carbon emissions as much as possible and invested in projects that reduce or remove emissions from the atmosphere. Overall, the emissions from producing our coffee products equal net-zero or are 'neutral'.

We have contributed to projects in regions that we source green coffee from and within Australia. These projects include reforestation work in Peru, providing clean & healthy cooking equipment to farmers in Guatemala, and Indigenous fire management projects in Australia.

Read about our offsets [here](#).

WHY

Why have we gone Carbon Neutral? FTA Coffee has gone carbon neutral in order to take responsibility for the emissions associated with producing our coffee and show our commitment to climate action. We are doing our bit and we are providing our clients with an easy way to take climate action with us.

What emissions does green coffee cause?

2kg emissions from farm to roastery door

The results of our carbon inventory found that green coffee contributes a whopping 2kg CO₂-e of emissions for every kilo of beans imported to Australia.

0.3-1kg emissions at the cafe gate

The roasting process also adds a further 0.3-1kg CO₂-e of emissions for every kilo of roasted coffee beans - dependent on the set up of the roastery and the equipment used.

FTA offers two carbon neutral solutions.

To the Roastery Gate

All emissions from the farm to the roastery door are accounted for at no cost to the roaster. These include emissions from farming, milling and logistics as well as FTA coffee's operations.

To the Cafe Gate

All emissions from the farm to the cafe door are accounted for at an additional cost. This includes all of the emissions listed above, as well as your own emissions related to the roasting and delivery of that coffee to your customer.

What does this all mean for you?

It means that all of the coffee that arrives at your roastery door from FTA is 100% carbon neutral.

If you're interested in taking this a couple of steps further, we can also work with you to offset your own emissions so you can provide carbon neutral roasted coffee to your customers.

Take the next step!

Contact FTA Coffee and ask how you can leave 'One Less Carbon Footprint' on our planet when purchasing green coffee.

Change happens when we all play a part.

Did you know that emissions in the supply chain are often significantly higher than those of a company's own operational footprint?

By choosing carbon neutral certified suppliers you can dramatically reduce the emissions of your business.
